

Population Payment Management

Overview

As healthcare organizations of all types march boldly into the land beyond fee-for-service care delivery there is one thing that is certain...there's a lot of uncertainty. Where do we start? How do we measure? How do we scale? CMS, states and commercial health plans are pushing forward with their value-based initiatives on a wider scale without clear direction on how to successfully deliver these programs to a larger population, drive adoption within their provider networks and make these programs successful for all stakeholders.

So what steps can insurers, ACOs and state Medicaid agencies take to ensure the adoption and success of their value-based programs while addressing their operational challenges? If value-based reimbursement and care are the future of healthcare then how can insurers overcome their program automation and modeling, scalability and analysis challenges to enable the delivery of higher quality care at a lower cost?

Edifecs Population Payment Management delivers a scalable platform that enhances a healthcare entity's ability to target, design, administer and optimize their value-based initiatives (including P4P, ACO programs, MSSP, SDOH interventions, etc.). It models and analyzes impact of value-based reimbursement models, performs "what-if" analyses of medical costs—including against

national and regional benchmarks—and enhances intelligence into the risk of their member populations. Flexible templates reduce program design complexity and impactful visualizations and key performance indicators improve value-based outcomes for all stakeholders while enhancing provider buy-in through increased transparency.

Use cases supported

Episode of Care/Bundle Payments/CMS BPCI

- All variations of episodes supported, including Prometheus episodes and Prometheus episode analytics

Shared Savings/Risk/CMS MSSP

- Total cost of care methodologies – from attribution to budgeting and settlements – are included as base templates

Pay for Performance

- P4P and pay-for-reporting can easily be configured with flexible quality, performance, point, and tiering settings

Long Term Services and Support

- State Medicaid modules such as long-term services and supports initiatives, with associated scoring and add-on rates for MCOs, are available

CMS HCPLAN APM Framework Categories — 2B to 4C

- All CMS APM framework categories from 2b to 4c are supported by PPM

Why Edifecs

- Unmatched platform to consolidate and automate all operational and analytical components of value-based programs
- Data-agnostic in terms of types of data that can be ingested and leveraged (e.g. administrative, financial, clinical, pharma, etc.)
- Near real-time insight into financial, quality and contractual performance
- Consolidated and contextualized data views for all program stakeholders

Key Capabilities and Features

Capabilities

Improve actuarial accuracy and auditability

Enhance data collection, exchange, and analysis

Enhance attribution accuracy and timeliness

Streamline strategic program scalability

Drive demonstrable ROI from VBR programs

Features

Included in solution are sound actuarial methodologies for attribution, risk adjustment, budget setting, completion factors, settlements, and more. All system activities and program output are fully repeatable and auditable across all programs and across all time periods.

Ingests and enriches medical claims, Rx, enrollment, behavioral health, self-reported quality data, quality submissions, risk data, attribution data, and more, for executing value-based programs and tracking cost and quality goals.

Attribution processes can be automated, and all output is fully visible and available to providers prospectively for upcoming performance periods.

Programs today are often managed via multiple vendors, multiple data sources, and multiple spreadsheets. SME knowledge is often contained in one or two resources. Edifecs will 'systematize' all of the program components and ongoing activities, consolidating and automating to allow sustainability and scalability.

Enabling program modeling, flexibility for program optimizations, and a high level of transparency for stakeholders (cost, quality, trending, etc.), our solution will help ensure program goals are met or exceeded.

Edifecs Inc. is a global healthcare software company committed to improving outcomes, reducing costs, and elevating value of healthcare for everyone. Edifecs delivers the industry's premier IT partnership platform to providers, insurers, pharmacy benefit management companies, and other trading partners. By mobilizing its leading solutions at the front end of the healthcare information pipeline, Edifecs provides a unified platform for partners to flexibly pilot and scale new initiatives using their existing enterprise system. Since 1996, hundreds of healthcare customers have relied on Edifecs partnership solutions to future-proof their leading initiatives in the midst of a dynamic healthcare landscape. Edifecs is based in Bellevue, WA, with operations internationally. Learn more about us at edifecs.com.
